

2-3

Determine the magnitude and direction of the resultant of two forces acting on the eye hook shown in Fig. P2-3 by (a) the graphical method and (b) the trigonometric method.

Solution.

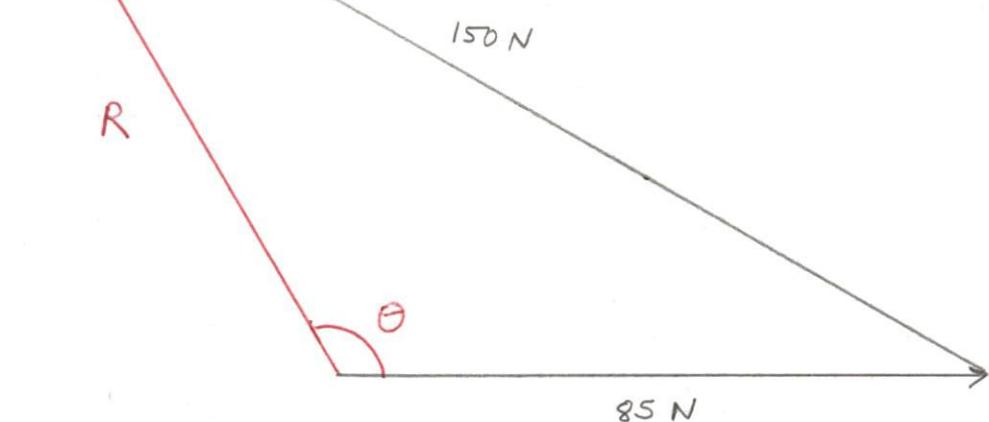

(a) Graphical

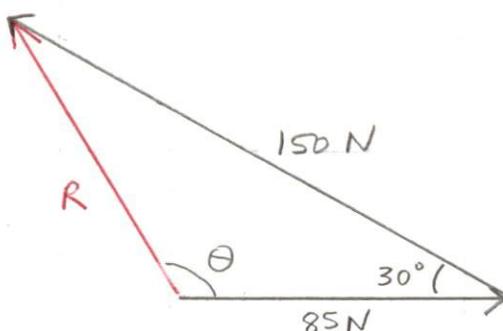

scale 1cm = 10 N

$$R = 87 \text{ N}$$

$$\theta = 120^\circ$$

(b) Trig Triangle-Rule (Head-to-Tail)

Law of Cosines

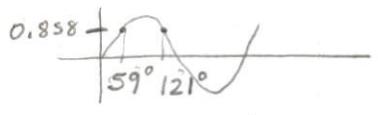

$$R = \sqrt{85N^2 + 150N^2 - 2(85N)(150N) \cos 30^\circ} = 87.4 \text{ N}$$

Law of Sines

$$\frac{\sin \theta}{150 \text{ N}} = \frac{\sin 30^\circ}{87.4 \text{ N}}$$

$$\sin \theta = \frac{150 \text{ N} (\sin 30^\circ)}{87.4 \text{ N}} = 0.85812357$$

$$\theta = \sin^{-1}(0.85812357) = 59.1^\circ$$

$\theta$  is obtuse

$$\underline{\underline{\theta = 121^\circ}}$$
